

No other radio broadcasts available in the US compare to XM Satellite Radio. Not only do we get to listen to the music we pay for, but we can hear it whenever we want. XM Radio introduced weather and traffic stations of which I have used while travelling to Houston and Dallas. No other FM station broadcasts continuous traffic reports. I am kept informed up to the minute unlike standard radio where I have to wait for the traffic report to broadcast at its preset time.

This service is like no other. It should not be revoked. The benefits are wonderful and since its listener supported by our monthly fee why should it matter to the FCC - standard radio still does their thing, let XM do theirs!
